

Sample Document

This is a sample document generated for testing the document extraction service. It contains headings, paragraphs, lists, and a table so extraction and rendering can be verified end to end.

Introduction

Document extraction services need to correctly parse **bold text**, *italic text*, and plain paragraphs across many file formats. This file was converted into several formats to exercise that pipeline.

Key Points

- Supports headings and nested structure
- Supports ordered and unordered lists
- Supports tables with multiple columns
- Supports emphasis and simple inline formatting

Sample Table

Name	Category	Score
Alpha	Test	91
Beta	Test	78
Gamma	Sample	85

Conclusion

If this text is extracted correctly, the document extraction pipeline is working as expected for this file format.
